The relationship between spinal cord damage and reduced speech intelligibility after intramedullary ventral pontine tegmental gliomas. The relationship between the extent of damage to the central nervous system (CNS) and speech intelligibility in patients with surgically treated intramedullary ventral pontine glioma was investigated. Speech samples were elicited from 13 patients with intramedullary ventral pontine gliomas, using the Rey auditory verbal learning test (RAVLT), the CVLT and a picture description task. The patients were evaluated with respect to their neurological status using the Alda disability scale and their speech intellig
