It is a multi-use application with the ability to...Time to Bridge the Digital Divide In January of 2017, as part of a regularly scheduled staff meeting, I was told by my boss that there was a new piece of business that we should be aware of. "Hang on to your hats, guys", he said, "in three months, we'll be needing a room big enough to host a corporate headquarters for a service called The Bridge." I was intrigued. A room big enough to house a full corporate headquarters? For what? The Bridge was just one of those names. I didn't remember it at all, but I never forget to ask questions, so I knew right away that I wanted to go and see it for myself. A quick Google search and a handful of impressions led me to The Bridge. It quickly became apparent that this wasn't just any kind of building. The place is enormous. Actually, it's only ever been used for this one thing. And a lot of that one thing is people. The Bridge was built in the early 2000's. The client wanted to centralize and grow their student population at an out of town teaching site. Now, a lot of people in this position would have carved out an office or a conference room and just started to set up, but the client already had the space they needed, so they needed to make use of it. The Bridge is a digital hub, a meeting place, a place for people to go to sign up for classes, community engagement, and even just to meet some new friends. The Bridge is like many of the other tools at the Sterling College Toolbox. It's a way to bridge the gap that sometimes exists between people with varying levels of technology and literacy. It's a place where we can come together and show the world that we're worth more than just a Facebook post. So how can your organization help? This is something to think about when running your next fundraising campaign or trying to move to a new location and making sure your people are fully prepared for the transition. As with the toolbox, make sure you know how your organization can contribute to bridging the digital divide in your own community. How b7e8fd5c8

What's New In WinTrezur?

WinTrezur is lightweight application that comes packed with many dedicated parameters for helping you view images stored in your computer and the contents of encrypted archives, as well as create archives. The user interface is clean and offers quick access to the local files and folders stored in your PC. The program extracts the contents of A2R and ZIP archives, and you can directly browse them from the primary panel. Provided that you have the right password, you can perform some changes inside the archived files, namely embed new items in the archive or delete the existing ones. When it comes to creating archives, you can select the files, add a folder prefix, specify the password, and configure the encryption settings in terms of compression level and algorithm (e.g. AES, Blowfish, Serpent, Camellia). Additionally, you can make the program skip the hidden files, process input ZIP entry files, create ZIP archives and open the archive at the end of the task. The image viewing feature allows users to open the pictures and make different operations, namely rotate the images, zoom in or out, adjust the levels for gamma, brightness, contrast, saturation and hue, go to the previous or next image, switch to full screen mode, as well as create slideshows by specifying the time interval and directory. Other important features worth mentioning are represented by the possibility to split and merge files, find duplicate items and resize images. All in all, WinTrezur proves to be a fully-featured application that helps users compress or decompress files and view images. However, the entire process is not intuitive and you may spend some time trying to figure out the function of each built-in parameter.
